

Jinhyeok Kim

Artificial Intelligence Graduate | Project Coordination | Data Analysis | Planning and Reporting

Sydney, NSW, Australia | 0468 544 027 | winsuwon127@gmail.com | Portfolio: jinhyeok-portfolio-amber.vercel.app | GitHub: github.com/Jinhyeok513

Professional Summary

Artificial Intelligence graduate with academic project leadership, data analysis, planning and reporting experience. Strong foundation in Excel-based scheduling, WBS development, risk identification, resource estimation and cross-functional communication.

Core Skills

Project coordination | Task allocation | WBS | Gantt scheduling | Critical path | Risk management

Budget planning | Resource planning | Microsoft Excel | PowerPoint | Analytical reporting | Stakeholder communication

Python | Data analysis

Education

Bachelor of Artificial Intelligence - Completed 2026

University of Technology Sydney (UTS), Sydney, Australia

- Graduated with Distinction; WAM 77.94 and GPA 5.88/7.00.
- Relevant study included data analytics, machine learning, computer vision, generative AI, software development and business information systems.

Diploma of Information Technology - 2023

UTS College, Sydney, Australia

- Built foundations in Python and Java programming, web systems, system analysis, technical documentation and business information systems.

Selected Project Experience

Event Management System Project Plan - Team Lead | 2025

Academic Project Management Case Study | Project Management | Excel | WBS | AON | Gantt scheduling | Risk and budget planning

- Led a seven-member academic team through planning, task allocation, section review and final integration for a proposed AUD 1.5 million Event Management System.
- Coordinated WBS, AON and Excel-based Gantt planning with more than 100 tasks, dependencies, milestones, float and critical-path analysis.
- Reviewed risk, budget, human-resource, stakeholder and change-control sections to improve consistency before final submission.

BioGeoDA - Australian Plant Data Integration and AI-Assisted Trait Extraction | 2025-2026

UTS AI/Analytics capstone team project and public portfolio reconstruction | Python | Pandas | NLP | TF-IDF | Logistic Regression | BERT QA | Streamlit | GitHub

- Cleaned and standardised multi-source plant datasets by reviewing missing values, duplicate records, inconsistent species names and mixed trait formats.
- Developed keyword-tagging and fuzzy-matching workflows to locate species in OCR-processed botanical text while retaining source, page, paragraph and context metadata.
- Worked across TF-IDF classification and BERT-based question-answering pipelines for keyword-dependent and context-dependent trait extraction.

AI Gym Trainer - Exercise Video Analysis Application | 2025-2026

Portfolio AI application | Python | Next.js | FastAPI | MobileNetV2 | MediaPipe Pose | OpenCV | CSV/JSON export

- Built an end-to-end video analysis workflow covering upload, preprocessing, exercise classification, pose extraction, annotated video output and session reporting.
- Integrated MobileNetV2 classification with MediaPipe Pose landmarks, OpenCV rendering, joint-angle calculations and rule-based feedback.

Languages

- Korean - Native
- English - Professional communication skills
- Chinese - HSK Level 4

Work Rights and Availability

Current Australian work-rights details and full-time availability available on request.
